

Mid-term Examination

General Directions: This examination is divided into three sections of four questions each. You are to answer a total of four questions, choosing at least one from each section.

The Historical Background to Logical Empiricism

1. Sketch the developments in the foundations of geometry in the nineteenth century that had a bearing on the development of logical empiricism.
2. Sketch the kind of argument that Pierre Duhem employed to motivate his brand of conventionalism. In what sense is Duhem's conventionalism a species of epistemological holism?
3. Recent scholarship emphasizes logical empiricism's debt to the Marburg neo-Kantian tradition. After briefly outlining the development of that tradition, describe some of the specific neo-Kantian influences on the early development of logical empiricism.
4. The task confronting logical empiricists in the early 1920s is said to have been that of developing a new form of empiricism capable of defending the empirical integrity of Einstein's general theory of relativity in the face of neo-Kantian reactions to relativity. What was the issue under debate here?

The Vienna Circle and Its Friends

5. Moritz Schlick was well known in his pre-Vienna Circle days for advocating a "semiotic" theory of truth as "univocal" or "unambiguous" ("eindeutige") coordination or correlation between proposition and fact. Explain what Schlick meant by the semiotic view of truth and contrast this view with both correspondence and coherence views of truth.
6. Hans Reichenbach's first book, *Relativitätstheorie und Erkenntnis Apriori*, advanced a novel point of view about the a priori. What was that view and what kind of reaction did it elicit from Schlick?
7. In the 1920s, two views emerged within the Vienna Circle regarding (a) the role of conventions in scientific theories and (b) the empirical content of scientific theories. We termed these views "epistemological holism" and (for want of a better term) "epistemological atomism." Explain and contrast these two views.
8. What was the protocol-sentence debate all about? Be sure to explain the positions of Otto Neurath and Moritz Schlick.

Do Some Philosophy

9. Is scientific realism compatible with the view that theory choice is underdetermined by evidence?
10. We spoke in class about the question of the "gap" between the contents of subjective experience and putatively objective, scientific knowledge formulated propositionally. In your opinion, can this gap be bridged? If not, why not? If so, how? Or is the question itself perhaps not well posed?
11. A corollary to Gödel's first incompleteness theorem is that all first-order theories as powerful as or more powerful than elementary Peano arithmetic will be non-categorical, meaning that they will not determine for themselves a class of models all of the members of which are isomorphic to one another. We spoke in class about how this result may be read as implying the failure of the Marburg program. More generally, one often takes this to point to limits on the ability of theory to capture reality and, perhaps, as occasioning some deep questions about realism itself. On the other hand, one could also read it as implying that Hilbert was wrong in saying that to think clearly is to think axiomatically, or that one is wrong to press formal methods too far in epistemology. What do you think?
12. Neurath argued that there is a proper role for social and political values in theory choice. So, too, have some contemporary feminist philosophers of science, some of them, such as Helen Longino, adducing arguments strikingly like those of Neurath. Others worry that allowing a role for social and political values in theory choice necessarily compromises the objectivity of science. What is your view?
