

New Ge Detector Filling Schedule: May 2007 – September 2008

Here is the latest detector filling schedule. For those that are unfamiliar with this duty, please see Larry Lamm at least one week prior to the beginning of your assigned month.

All of our detectors are important for all the groups in the laboratory and we appreciate your help in maintaining them. Please note that these detectors may be damaged if they are not maintained at liquid nitrogen temperatures, so this "Filler of the Month" duty is important to the entire laboratory.

Detectors:

3	55% Efficiency HPGe detectors	To be filled twice per day
2	"Clover" HPGe detectors	To be filled twice per day
1	SiLi X-Ray detector	To be filled twice per day
2	35% HPGe	To be filled twice per week
