CONTENTS

1. **Introduction.**
   1.1. Networked Control Systems.
   1.2. Model-Based Frameworks.
   1.3. Event-Triggered Control.

PART I

2. **Model-Based Control Systems: Stability.**
   2.1. Fundamentals: Model-Based Control Architecture.
   2.2. Continuous Time LTI Systems: State Feedback.
   2.3. Discrete Time LTI Systems: State Feedback.
   2.4. Alternative Conditions for Stability of MB-NCS.
   2.5. Notes and References.

3. **Model-Based Control Systems: Output Feedback and Delays.**
   3.1. Output Feedback Using State Observers for Continuous Time Systems.
   3.2. Output Feedback Using State Observers for Discrete Time Systems.
   3.3. Network Induced Delays: Small Delay Case.
   3.4. Network Induced Delays: Large Delay Case.
   3.5. Notes and References.

4. **Model-Based Control Systems with Intermittent Feedback.**
   4.1. Continuous Time Systems with State Feedback and Closed-Loop Mode.
   4.2. A Different Approach: Fast-Slow Update Rates.
   4.3. Discrete Time Systems with Intermittent Feedback.
   4.4. Alternative Conditions for Stability of MB-NCS with Intermittent Feedback.
   4.5. Notes and References.

5. Time-Varying and Stochastic Feedback Updates.
5.1. Lyapunov Analysis of MB-NCS.
5.2. Almost Sure Asymptotic Stability.
5.3. Mean Square Asymptotic Stability.
5.4. Notes and References.

6. Event-Triggered Feedback Updates.
6.1. Model-Based Event-Triggered Architecture.
6.2. Event-Triggered Control Strategies.
6.3. Systems with Network Induced Delays.
6.4. Notes and References.

7. Model-Based Nonlinear Control Systems.
7.1. Constant Update Time Intervals.
7.2. Dissipative Nonlinear Discrete-Time Systems.
7.3. Notes and References.

8. Quantization Analysis and Design.
8.1. Systems using Static Quantizers.
8.2. Static Quantization, Event-Triggered Control, and Network Induced Delays.
8.3. Dynamic Quantization: A different Way of Adapting to System Response.
8.4. Notes and References.

PART II

9. Optimal Control of Model-Based Event-Triggered Systems
9.1. Continuous Time Robust LQR.
9.2. Discrete Time Robust LQR.
9.3. Finite-Horizon Optimal Control and Optimal Scheduling.
9.4. Notes and References.

10. Performance Analysis using Lifting Techniques.
10.1. Performance Analysis of MB-NCS using Continuous Time Lifting.
10.2. Optimal Controller Design for MB-NCS.
10.3. Notes and References.

11. Reference Input Tracking.

11.1. Reference Input Tracking Controller.
11.2. Discretized Input Tracking Analysis.
11.3. Output Feedback Tracking Using Different Dimension Models.
11.4. Notes and References.

12. Adaptive Stabilization of Networked Control Systems.
12.1. Adaptive Stabilization of Deterministic MB-NCS.
12.2. Adaptive Stabilization of Stochastic MB-NCS.
12.3. Applications of Parameter Estimation and the Model-Based Approach.
12.4. Parameter identification using additional measurements.
12.5. Notes and References.

13. Multirate Model-Based Systems.
13.1. Multirate State Updates using a Centralized Controller.
13.2. Two-Channel NCS.
13.3. Notes and References.

14. Distributed Control Systems.
14.1. Single-Rate Periodic Communication.
14.2. Multi-Rate Periodic Communication.
14.3. Centralized Model-Based Event-Triggered Control.
14.4. Decentralized Model-Based Event-Triggered Control.
14.5. Notes and References.
