AE 440: Flight Mechanics and Introduction to Design
Fall 1998

Project #2

Due: Wednesday, September 2, 1998

Use the data provided by a fellow "designer" to render a three view drawing of the aircraft which has been described to you in terms of a set of basic geometric parameters. Please prepare and submit a memorandum containing:

1. A three view sketch of the aircraft similar to that which you prepared for Project 1
2. An assessment of the suitability of the parameter list provided to you. On the data sheet provided to you clearly mark the items you actually used to construct your sketch as well as those which you did not use and make a list of additional pieces of information which you needed in order to construct your concept drawing.
