DEPARTMENT OF AEROSPACE AND MECHANICAL ENGINEERING
AME40463: Senior Design Project**

GIO'S WORDS OF WISDOM

1. Website Development

After briefly perusing the group websites, I am pleased with the progress that has been made. A few of your websites are looking great already! For those of you who have not had a chance to post something on your webspace, I encourage you to do so quickly. The website is the primary means of communication you have with Upper Management.

Along with the idea that this course is to be treated as an assigned project in an actual company, I will not be providing a tutorial on how to build your website. That being said, do not fret; there are many resources available to you concerning web site development. The most readily accessible resource is the OIT website. On it, you will find that OIT holds training sessions for web development as well as has assorted documents which will walk you through the website creation process. It might also be worthwhile to check the library, bookstore, or other assorted book retailers for there are a multitude of “how-to” books covering website development. I have included the two following OIT links as a shove in the right direction...

<http://oit.nd.edu/training/documents/discoverit.pdf>

<https://oit.nd.edu/training/documentation/index.shtml#web>

2. Task Tracking Summary (TTS) Comments

From now on, weekly TTS reports are due. These should be clearly posted on your website and kept up to date. Please save the TTS reports as .xls files, not the Office 2007 .xlsx or .pdf! Also, please make sure your website links to the original document, i.e. no “Google Docs.”

3. A Word of Caution

I certainly hope this goes without saying but I'll mention it anyway – your assigned group netID (email and webspace) is to be used for Senior Design correspondences/use ONLY. Any group who chooses to misuse their netID will suffer severe consequences from Upper Management.
