

### IPFA09 - Short assignment 3

In his article ‘The practice of climate simulation and its social and political context’, Arthur Petersen first reviews his arguments for methodological pluralism and pervasive uncertainty in climate science. He then (225-226) goes on to argue that these features mean that ‘the social and political context of climate simulation’ influences climate science in important ways. In one paragraph of 150-250 words,

- (1) explain what Petersen means by the social and political context of climate simulation and
- (2) explain how he thinks this context influences climate science.

**You do not need to put any part of your summary in premise-conclusion form.**

Email your summaries to me (dhicks1@nd.edu) as a Word (DOC or DOCX) file by 5pm on **Tuesday, December 1**. You don’t need to worry about the rules for turning in papers for this assignment.
