

Web Design: navigation bars and the use of Flash

Navigation bars may use dreamweaver, flash, or a combination of the two.

Website components created in Dreamweaver are easier to alter than those created in Flash. Therefore, it may best to create navigation bars in Dreamweaver if they will be frequently updated or altered.

For flash tutorials regarding navigation bars & menus check out

www.flashkit.com/tutorials/index.php

Click on “interactivity,” then choose “navigation” for an entire listing of free tutorials and tips.
