

**FIN 40500**  
**Group Presentation #1**  
**Currency Analysis**  
**Due Date: 10/03/06**

The point of this project is to apply the currency valuation methods from class using actual economic data. Imagine that you are a currency analyst for a major bank. You have been assigned the (*insert your choice of currency here*). Specifically, you have been asked to:

- Present a brief trading history for the currency
- A short term forecast for the currency (i.e. trading ranges for the next few days)
- A medium term forecast (i.e. trading ranges for the upcoming month)
- A longer term forecast (i.e. predictions for the upcoming year).

You are allowed to use any economic data you can find as well as forecasts from other analysts and any available news stories. Your report should include two types of analysis:

- Fundamental Analysis (i.e. forecasts using economic data) – this is more relevant for the medium to long term forecast.
- Technical analysis (using currency charts and technical indicators) – this is possibly more relevant for the short term.

You should be prepared to turn in a 5-10 page analysis (including charts, graphs, etc) and to give an (approximately) 10-15 min. power-point presentation.
