

Using a learning module to create an image gallery

A page of content can include files, web links, discussions, assessments, assignments, and more. It can appear as a **folder** with icons or as a **learning module** with a hierarchical list of titles.

Gather files (gif, jpg, png) into a folder ahead of time. Use a basic image editor to scale down any large images – 800 pixels by 600 is a good size.

1. Click the “Build” tab and go to the page where you want the item to appear
2. Click “Add Content Link” and select “Learning Module”
3. Click “Create Learning Module”
4. Enter a title and click “Save”
5. Click the title of the learning module
6. Click “Add File” and select “Browse for Files”
7. Click “My Computer” and use the “Choose file” buttons to select the gallery images
8. Click “OK.”
9. Test the gallery using the “Student View” tab
