

5th Annual Midwest Conference on Protein Folding, Assembly and Molecular Motions

at the University of Notre Dame - April 24, 2010

A one-day regional conference on all aspects of protein folding research, including:

1. *In vitro* studies

Protein folding, binding, aggregation, and dynamics

2. *In silico* approaches

Computational modeling and genome-wide approaches to understanding protein folds, dynamics, and interactions

3. *Proteins in vivo*

Co-translational folding, chaperones, aggregation/amyloid formation, mechanisms for recognizing and clearing misfolded proteins

This conference is an excellent opportunity for students and postdocs to present their results - speakers for most talks will be selected from submitted abstracts

Notre Dame is 90 min from Chicago, 3 hr from Ann Arbor, 3 hr from Urbana, 4 hr from Madison, 4 hr from Cleveland, 5.5 hr from St. Louis, 7 hr from Toronto... the campus is beautiful, and reserved hotel rooms will be available.
